

PROFESSIONAL SUMMARY

Full-Stack Developer and Computer Engineering student with 1+ year of professional experience shipping production web applications across frontend, backend, data, and deployment. Experienced with C#/.NET, TypeScript, React/Next.js, and PostgreSQL, with hands-on work in Docker, CI/CD, and Azure deployments. I follow problems end to end, from relational data models and backend behavior to user-facing features and delivery, while developing deeper judgment in software architecture.

TECHNICAL SKILLS

- Core Languages:** TypeScript, C#, JavaScript, SQL

Frontend: React, Next.js, Tailwind CSS, HeroUI

Architecture & Practices: Dependency Injection, SOLID principles, Layered architecture, Service / Repository patterns

Additional Exposure: Go, LLM APIs, VS Code Extension Development
- Backend:** ASP.NET Core, Entity Framework Core, Bun, Hono, REST APIs

Data: PostgreSQL, Relational data modeling

Delivery & Tools: Docker, Docker Compose, GitHub Actions, Git, Linux, Nginx, Azure

PROFESSIONAL EXPERIENCE

Full-Stack Developer Intern June 2026 - Present

- Fabrikod**
- Developed and shipped an end-to-end analytics dashboard for an enterprise document-management platform, covering national, provincial, organizational, personnel, and time-period views.
 - Implemented frontend interfaces and backend data flows for operational metrics, period comparisons, geographic breakdowns, and organizational performance views.
 - Fixed a cross-table consistency bug where deleting an upload left its related document included in statistics, preventing stale records from affecting reported metrics.
 - Extended permission-aware UI behavior, resolved production table and layout issues, and contributed within the product's established layered architecture.
- Technology:** Next.js, TypeScript, Tailwind CSS, HeroUI, .NET, ASP.NET Core, PostgreSQL

Full-Stack Developer May 2025 - May 2026

- Fuyabe Software**
- Delivered full-stack features for a production university-preference platform serving student, advisor, administrator, and partner workflows.
 - Built authentication and access flows including Google Sign-In, OTP verification, role-based access, email/SMS integrations, filtering, pagination, and administrative interfaces.
 - Developed a pipeline for annual ÖSYM Excel datasets that normalized records, connected programs across academic years, and surfaced renamed or discontinued programs for human review.
 - Automated a previously manual annual data-preparation workflow, saving approximately two working days per update cycle.
 - Containerized applications and maintained GitHub Actions pipelines for automated deployments to an Azure-hosted server.
- Technology:** TypeScript, Next.js, Bun, Hono, PostgreSQL, Docker, GitHub Actions, Azure

SELECTED PROJECT

Local-First Code Reviewer Go · TypeScript · Git · LLM APIs · VS Code

- Personal developer tool**
- Developing a local-first developer tool that reviews staged Git changes before commit through a Go CLI and VS Code integration.
 - Designed a diff-first workflow with separate correctness and security review paths, lightweight security triage, and selective repository context.
 - Using the tool in personal development workflows and iterating on its behavior based on practical review results.

EDUCATION

Istanbul Medeniyet University

B.Sc. in Computer Engineering

2023 - 2027 (Expected) · GPA: 3.25 / 4.00

LANGUAGES

Turkish · Native

English · Upper-Intermediate (B2)
